Dosing pumps family

Smart liquid dispenser

Dosing pumps family

To meet your diverse needs we have created the widest family of dosing pumps on the market. The unlimited configuration possibilities are a convenient and practical way to expand and personalise your dosing pump setup depending on individual needs, without the need to be limited to only one format and only one device size.

The dosing pump has been designed for reliability and ease of use. It is intuitive and precise, designed to meet the expectations of the most demanding aquarists.

Available in single version (Dosing pump), Triple (Dosing pump X3) and Quadruple (Dosing pump X4). All of which are controlled via the Smart Reef app individually or in groups of pumps, which makes them much easier to use.

Dosing pump

Dosing pump X3

Dosing pump X4

Dosing pump Pro

The Pro version works on the same principle as the standard Dosing Pump, but it is dedicated to small doses of liquid supplements, e.g. rare minerals or concentrated amino acids with a laboratory precision of 0.01 ml. This accuracy is provided by the use of a stepper pump as opposed to standard dosing pump, accuracy is further increased with the use of a much smaller diameter dosing tube.

Dosing pump Large

The Large version was developed to ensure high accuracy when moving large volumes of liquids. It provides a high flow rate of 1 litre per minute of operation with accuracy of 0.01 litre. This high capacity pump is ideal for automatic water changes and scheduled refilling of evaporated water.

Your own set

The widest range on the market allows you to personalise to your individual requirements and be tailored to your individual needs.

Why use a dosing pump?

- Maintains stable parameters thanks to systematic dosing.
- Ensures safety of the animals

Why from Reef Factory?

- High quality and compact size
- Does not require a central computer
- Intuitive configuration and control via Smart Reef
- Control from anywhere in the world
