

UK Information and directions for use

Pharmaceutical entrepreneur: Tetra GmbH, Herrenteich 78, D-49324 Melle, Germany, Tel. +49 (0) 5422/105-0, Made in Germany, www.tetra.net

Manufacturer: Aquarium Münster, Pahlsmeier GmbH, Galgheide 8, D-48291 Telgte, Germany

Tetra Medica Contralck Plus

Method of administration: Solution for adding to aquarium water

Amount of active ingredients per 1 ml of solution: 2,5 mg of methylthioninium chloride, 1,0 mg of malachite green oxalate, 0,5 mg of methylrosanilium chloride, 0,3 mg of acriflavine chloride

Areas of application: White spot disease (Ichthyophthirius multifiliis) and other skin and gill parasites such as Trichodina and Chilodonella.

Disease symptoms: White spots or patches on skin and fins, shaky and rubbing movements, clamped fins, rapid breathing, dull mucous membranes.

Contraindications and side effects: None known. The pet owner is respectively asked to inform a veterinarian or pharmacist of any newly-discovered side effect. The pet retailer or product manufacturer should also be informed of any side effects.

Remedy for freshwater tropical fish

Dosing instructions/Method of application: Shake well before use. The treatment cycle for Tetra Medica Contralck Plus lasts for 8 days. During treatment, please ensure that the aquarium is well aerated. Switch off any UV clarifiers and ozone systems. Do not use activated carbon or any other absorbent filter media to filter the water. Wherever possible, please clean the filter properly before use. Always ensure that treatment is carried out whilst the tank is fully stocked to prevent any currently healthy animals from subsequently becoming infected. Dispense Tetra Medica Contralck Plus evenly into the aquarium in the amounts as stipulated below:

Day 1: 20 drops (1 ml) per 100 l of aquarium water. You are advised not to feed the fish.

Day 2: 20 drops (1 ml) per 100 l of aquarium water. You are advised not to feed the fish.

Days 3 to 6: No application. Feed as normal.

Day 7: 20 drops (1 ml) per 100 l of aquarium water. You are advised not to feed the fish.

Day 8: No application. Feed as normal. Carry out a partial water change (30-50%). After the partial water change we recommend you to use activated carbon to filter the water.

Repeat treatment is recommended directly afterwards, particularly if white spot disease persists.

Water discolouration is due to the active substance and will disappear after a few days.

Instructions for appropriate use:

- Do not use Tetra Medica Contralck Plus in conjunction with any other disease remedies

- If excessive amounts of the product are added to the aquarium, carry out a partial water change equivalent to those amounts.

Special storage precautions:

- Keep this remedy out of the reach and sight of children.

- Store the product in its original packaging.

- Keep the product away from sunlight.

Special precautions:

- For animal treatment only.

- Do not use once the expiry date has passed.

- This product should not be used on crustaceans, shrimps, snails, mussels and other invertebrates as it can lead to intolerance.

- May be harmful to delicate plant species such as Ceratophyllum genus (hornwort).

- Special precautionary measures for disposal of unused remedies:

- Dispose of this product and its packaging at a hazardous or special waste collection point.
